

Disaster Recovery Solutions

The Economy is not the only threat to your business.

Southern California has been a hotbed for technology, biotechnology and many leading industries. Unfortunately we are also susceptible to a number of events that could impact your company's technology infrastructure and ability to do business. Whether it is from fire, flood, earthquake or power interruption, our Disaster Recovery solutions ensure your business can continue functioning in the face of these normally disruptive events.

Our highly skilled team of infrastructure architects and senior engineers have integrated the best proven technologies into a complete solution for your business. We can have your environment completely mirrored and documented with our proven methodology + toolset faster than any of our competitors, with a more complete and accurate deliverable that actually works.

- * **A Complete Mirror of every Server and all Data** - From every email to word document, it will be there.
- * **Extreme Encryption + Security Measures** - Our solutions incorporate the highest levels of security.
- * **24x7 Access to Your Data** - Easily access your data on demand, for compliance or peace of mind.
- * **Ongoing Simulations and Testing** - See your environment up and running firsthand!
- * **No Capital Expense** - Avoid the pitfalls of purchasing duplicate hardware.
- * **Powered by the best Technology Available** - EMC, VMware, Microsoft, Cisco.
- * **Detailed Documentation** - Compare our documentation to our competitors.
- * **Advice & Guidance from Seasoned Industry Veterans** - Leverage our expertise.

These are just a few of the features offered in our different packages. To find the solution that is right for your business, give us a call today. Our expert staff of engineers and business experts can match your needs with the best possible technology at competitive prices.
